(54) Title: REMOTELY CONTROLLABLE SWITCH FOR INCORPORATING IN A WALL SOCKET

(57) Abstract: The invention relates to a remotely controllable switch unit for switching the mains inside an electrical installation, wherein the switch unit comprises an electrically controllable switch, a control circuit for controlling the switch, a receiver coupled to the control circuit for receiving wireless signals, wherein the switch unit is adapted for mounting in a housing of a wall socket. As a result of these measures it is no longer necessary to place a separate unit between the wall socket and the plug for connecting thereto. The appearance of an electrical installation is hereby improved. Relative to a "bus" system and similar devices, the advantage results that arranging of such a switch unit can take place in particularly simple manner; no changes need after all be made to the wiring of the electrical installation.
